SPECTRATILE™ IS A PERMANENT ANSWER TO COMMON DROP-IN CEILING PROBLEMS

MIDDLEBURY, IN - Water damage, mold and mildew take their toll on lay-in ceiling installations requiring constant attention and replacement. SpectraTile™ from Parkland Performance Walls & Ceilings offers a permanent solution to that problem. The PVC tiles are totally waterproof, resist mold, mildew and bacteria growth and have been specifically praised by people with asthmatic conditions.

Available in four attractive, in-stock patterns and two popular sizes (2' x 2' and 2' x 4'), SpectraTile Ceilings are virtually maintenance free, reducing upkeep expense and making it easy to maintain a perfect ceiling appearance. There is absolutely no water damage or staining possible. The ceiling can be washed, scrubbed, and even pressure washed.

Achieving a perfect score on the ASTM Mold Resistance Test, SpectraTile Ceilings go beyond protecting against unsightly water damage and tackle the substantial problem with mold and mildew common on so many lay-in ceiling applications. Often, insidious and dangerous mold that forms in and around common ceiling tile gets drawn naturally into the duct system and spreads quickly throughout the entire home. SpectraTile also addresses combustion concerns, having passed Life Safety Code 10.2.3.7.3.

With an extended product life, SpectraTile has a ten-year warranty. The tiles resist impact damage and will not flake, break or create dust. With a Class-A Flame Spread and its other inherent qualities, SpectraTile Ceilings are ideal for problematic areas of the home such as basements, garages and utility areas.

SpectraTile is one in an ever-growing line of products from Parkland Performance Walls & Ceilings, all intended to respect the desire for exceptional aesthetic qualities while addressing the rigors of everyday use. More detailed information is available by calling 800-835-4110 or on the web at www.parklandproducts.com.
